

PearlAqua Micro

Meet Micro - killer of Legionnaires disease and the smallest point of use UV-C water disinfection system in the world.

Micro is designed to be integrated into point-of-use systems - drinking faucets, kitchen taps, wash basins - and is only in use when water is flowing, meaning power consumption is reduced saving you money on your energy bills.

Traditional UV mercury systems need to warm up, not Micro - instant on and off. LED lights ensure constant UV output regardless of water temperature, guaranteeing infection prevention. Our intuitive AutoMate flow sensor delivers on-demand disinfection whenever water is flowing.

Use Micro with drinking faucets, showers and wash basins and significantly save on energy costs.

Small

Under 3 inches wide, Micro is designed for the tightest installations

Powerful

UV-C LEDs kill over 99.99% of pathogens without the use of harmful chemicals

Cost Effective

Micro delivers huge cost savings versus traditional UV water mercury systems

Features

- Mercury free
- 2.1 GPM water flow rate
- 10,000 hour LED lamp life
- Remote start/stop system
- Low power consumption
- Manufactured in the USA
- 2 year warranty
- Dimension 2.5" x 4.5" x 2.5" - Weight 3 ounces
